Software Requirements Specification (SRS)

System: "The Internet" – UI Component and Web Behavior Demonstration Site

Base URL: https://the-internet.herokuapp.com/

---

1. Introduction

1.1 Purpose

The purpose of this SRS is to define the observable functional and non-functional requirements of the public web application hosted at the-internet. The site provides independent examples demonstrating common web UI components, behaviors, and edge cases for use in web automation and QA training.

1.2 Intended Users

- **QA Engineers**: Exploring UI automation scenarios like dynamic content and JS alerts.
- **Developers/SDETs**: Experimenting with locators and asynchronous behaviors.
- **Trainers**: Using the site as a demo system for practicing web testing techniques.

---

2. Functional Requirements (FR)

2.1 Checkboxes (/checkboxes)

- **FR-CB-01 (Rendering)**: The page shall display at least two checkbox input controls, labeled "checkbox 1" and "checkbox 2".
- **FR-CB-02 (Toggle)**: On click, the target checkbox shall toggle its checked/unchecked state.

2.2 Form Authentication (/login)

- **FR-FA-01 (Rendering)**: The page shall display input fields labeled "Username" and "Password" with a "Login" button.
- **FR-FA-02 (Success)**: The system shall authenticate the user when the username is "tomsmith" and password is "SuperSecretPassword!" and navigate to a "secure area".
- **FR-FA-03 (Error Handling)**: Invalid credentials shall result in an error message indicating information is wrong; the system shall not navigate.

2.3 File Upload (/upload)

- **FR-UP-01 (Rendering)**: The page shall display a file input control and an "Upload" button.
- **FR-UP-02 (Action)**: The system shall accept the selected file and update the page to reflect that the file has been uploaded.

---

3. Non-Functional Requirements (NFR)

3.1 Usability

- **NFR-U-01**: Page structures shall be simple so intended test interactions (clicks, hovers) are easily discoverable.
- **NFR-U-03**: Important interactive controls shall be visually distinguishable and labeled with descriptive text.

3.2 Reliability

- **NFR-R-01**: All example pages shall be accessible via their respective links without resulting in HTTP 404 errors.
- **NFR-R-02**: Randomized behaviors shall not cause JavaScript errors that prevent the page from rendering.

---

4. Edge Cases and Negative Scenarios

- **Typos (/typos)**: Users may refresh the page without seeing a typo due to randomness; automation match may fail.
- **Notification Messages**: Different messages can appear after each click; specific string assertions may fail intermittently.
- **Geolocation (/geolocation)**: If the user denies location permission, the page should handle this gracefully without crashing.

---

5. Out-of-Scope Items

- **Backend Storage**: No requirements are specified for databases or persistence behind the UI.
- **Mobile Behavior**: All requirements assume desktop-class browsers.
- **Accessibility**: Detailed ARIA roles or screen reader support are not defined.
